The Copenhagen Conspiracy

David Ferry, Arizona State University, USA

"Einstein had noticed immediately that Bohr's interpretation of quantum mechanics may be in conflict with the theory of relativity. How could separate measurements of particles that are correlated by a conservation-law have random outcomes without violating that law? Prof. Ferry takes us on a 'realistic' and interesting tour through the Copenhagen wonderland of quantum interpretations. A must-read for every engineer or scientist!"

Prof. Karl Hess, University of Illinois, USA

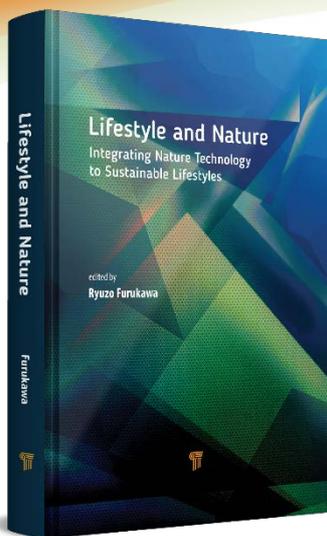

"An entertaining, pragmatic and forthright journey through the history of quantum mechanics exposing the almost religious sectarianism of those professing to understand what it means. Thoroughly recommended!"

Prof. John Barker, University of Glasgow, UK

Audience: General interest.

Sales Opportunity: General interest to readers, especially in the history of science, physics, and quantum mechanics.

Jan 2019, 370 Pages, GBP61.99

Lifestyle and Nature

Integrating Nature Technology to Sustainable Lifestyles

Ryuzo Furukawa, Tohoku University, Japan

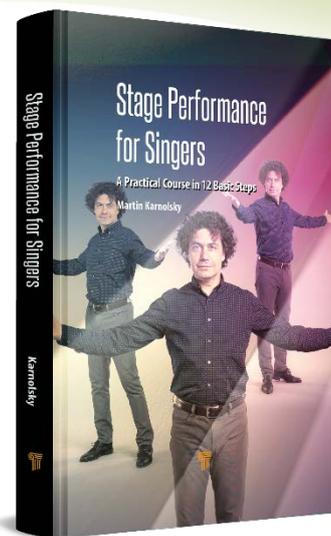

Environmental constraints are becoming increasingly severe, and now more than ever it is time that we confront head-on the change from an "underground resources" type of civilization to one with a new way of life and technology that embraces a sense of nature. To do so, we need to understand the process of the civilization change. We must change our way of thinking to backcasting in order to design future lifestyles and learn from the elderly who lived with nature under severe environmental constraints more than 70 years ago.

This book provides many examples of Japanese cities that conducted lifestyle design projects based on nature technology.

Audience: General interest.

Sales Opportunity: The book is a great reference for graduate-level students of environmental studies and engineering and for researchers in innovation, social science, engineering, and public policy, especially those with an interest in lifestyle change for a sustainable society.

Stage Performance for Singers

A Practical Course in 12 Basic Steps

Martin Karnolsky

"The book fills a large void in the study of the art of stagecraft that few have endeavored to attempt. He approaches his subject with passion and conviction, yet leaves room for interpretation. The generous amount of photographs and diagrams are invaluable in grasping the author's concepts, and are the next best thing to working with him in person, which I have had the pleasure of doing several times. Dr. Karnolsky is an inspired man who takes his subject to heart and, as a result, is highly effective in helping others to add new depths and dimensions to the art of stage performance. Bravo!"

Dr. Joseph Curiale, American Composer, Author, and Educator

Audience: General interest.

Sales Opportunity: This book is valuable in that it teaches singers to direct their own stage performance. It teaches singers how to be more successful on stage, how to be more charismatic and how to manage their audience the way they want.
